CODING PROJECTS

TCG Binder App | Flask, React, PostgreSQL, Tailwind CSS | [Live](#) | [GitHub](#)

Jun 2026

Demo Video: [Click here](#)

- Built and deployed a full-stack web application for Pokémon card collectors to plan and visualise binder layouts, supporting both traditional and michi collection styles
- Implemented secure user authentication using **Flask-Login** and **bcrypt**, with cross-origin session management across a **Vercel frontend** and **Render backend**
- Engineered complex grid logic to support **2×1 decorative images** spanning multiple slots, including swap, shift, and boundary validation across 2×2, 3×3, and 4×4 grid sizes
- Integrated the **Pokémon TCG API** for live card search and real-time market price lookup, and **Groq's LLaMA model** for AI-powered page layout suggestions

ADDITIONAL INFORMATION

- Languages: English (Native), Chinese (basic proficiency)
- Technical Skills: Proficiency in Python, Javascript, Java, Microsoft Excel, MATLAB
